

HUB

- Small devices
- Inexpensive
- Passive or Active
- Signal regeneration in Active Hubs
- Inefficient – as it can handle only one forwarding at a time
- half duplex communications

Bridge

Switch

- Resembles Hub
- Can handles many connections at same time
- Many switches can be interconnected to form larger networks
- Forwards data based on MAC addresses
- Channels data between ports
- Reduces collision by channelization
- full-duplex connections
- Micro-segmentation is possible in some switches

NIC, RJ45

NIC

Networking Network+ Guide to Networks, Tamara Dean

VLAN

Routers

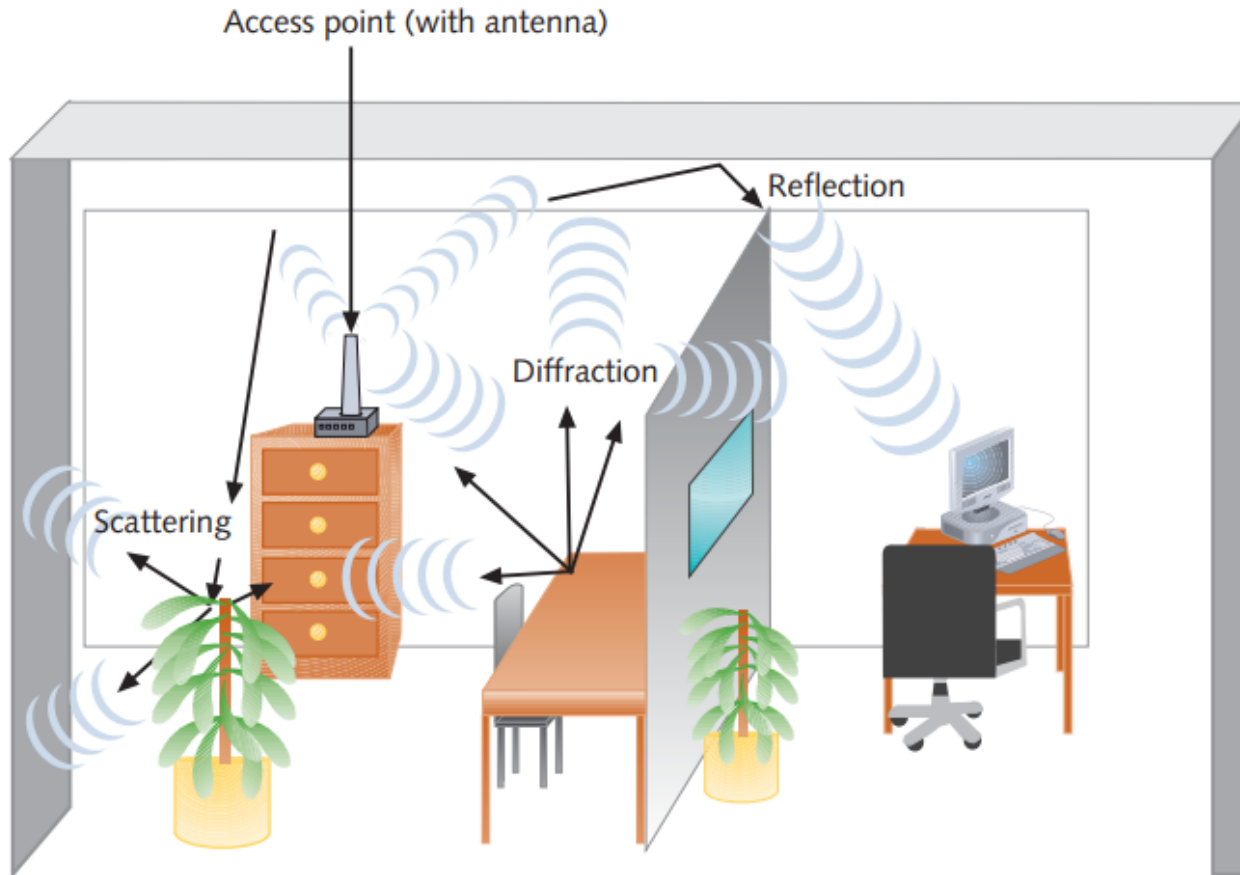

Interconnects LAN

Forwards data based on IP addresses

Routing Protocols are used for communications between routers

Wi-Fi

Networking Network+ Guide to Networks, Tamara Dean

- To provide wireless connection to clients
- Can be secured or not
- Provides flexibility and extension for networks
- Distance coverage based on spec

Modem

Networking Network+ Guide to Networks, Tamara Dean

- Does MOfulation and DEModulation
- Digital – Analog Conversion
- Modem speed based on UART chip
(Universal Asynchronous Reciever/Transmitter)

| UART Chip | Speed (bps) |
|-----------|-------------|
| 8250 | 9,600 |
| 16450 | 115,200 |
| 16550 | 115,200 |
| 16650 | 430,800 |
| 16750 | 921,600 |
| 16950 | 921,600 |
